WILLARS et al
Serial No. 09/842,027

Atty Dkt: 2380-232
Art Unit: 2662

AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph beginning on page 29, line 14, and continuing to page 29, line 18, as follows:

D2: If the non-SRNC node receives an application control message with the IP transport bearer container, the non-SRNC node includes an-a container in the RNSAP response message. The IP transport bearer container (and thus the RNSAP response message) includes the IP address and IP endpoint identifier for downlink traffic.

Please amend the paragraph beginning on page 32, line 29, and continuing to page 33, line 3, as follows:

In the case of the Iu interface where the MSC provides the ATM transport parameters, the ATM and IP parameters will be obtained from the gateway before sending the initiating application message. The initiating application message will include the ATM transport parameters received from the gateway. The RNC will then establish an AAL2 connection with the gateway.
